RESOURCE SHARING PLAN

Resulting findings and analysis of data collected using NIH funds for this proposal will be shared and made public through publication in peer-reviewed outlets. De-identified, original data will be shared as required by publication outlets and as outlined in the Data Management and Sharing Plan. Further, [redacted] maintains an institutional repository (Redacted), in which de-identified raw data can be made public by researchers. Where feasible, such data will be made available.

However, of note, this application does *not* request direct costs of $500,000.00 or more in any single year and does not involve a controlled experiment or modeling of live organisms.
